

## What is McAfee?

McAfee Total Protection is the always on, always up-to-date single solution for protecting your business. It's the only security decision a small or medium business will ever need to make.

McAfee keeps the PCs and laptops in your office safe and continuously protected with the latest security updates. The service works behind the scenes to keep your file servers and desktops free from viruses, spyware, hacker attacks and identity thieves. Everything is included in one integrated package which leaves you free to run your business without the cost and time involved in managing your own security.

### **McAfee benefits at a glance**

#### **Total protection**

Provides a comprehensive security solution in a single package so you can have peace of mind knowing your business is fully protected.

#### **Saves time and money**

No need to invest in separate software solutions or extra IT infrastructure. McAfee integrates the very best security technologies and offers full support and updates.

#### **Easy to set up**

McAfee is easy to set up and dashboard view makes it simple to perform scans, check for updates and configure security settings.

#### **Comprehensive protection**

Offers comprehensive protection over the internet to multiple users wherever they are located. Viruses, spyware, spam and phishing are all caught in the net through one integrated solution.

#### **All of the protection without the staff**

Get the latest technology with no equipment to purchase and no IT security specialists to hire.

#### **Expert management**

All your security requirements – anti-virus, anti-spyware, firewall and basic email virus protection is 100% managed by McAfee experts.

## The 5-in-1 advantage of McAfee:

- Anti-virus
- Anti-spyware
- Anti-spam
- Firewall
- Centralised console – dashboard

## Key features of McAfee

**1. Simplified management** McAfee Security Center, the easy-to-use, single web-based console, manages and reports on your security services. It centralises installation, configuration, reports, updates and group management, and makes security management simple.

**2. Automatic updates** Without any intervention, the system automatically updates at regular intervals. These fast updates keep your desktops and servers protected against security threats.

**3. Real-time email security** McAfee processes email in real time through a highly secure system, filtering and quarantining inbound threats from your email before they reach your network.

**4. Compatibility** Works with all major email applications such as Microsoft® Exchange, processing your mail with less than a one-second delay.

**5. One-stop protection** Automated virus, spyware, spam, phishing and desktop firewall protection, web-based management and reporting.

**6. Affordable** There is no need to buy additional security management software, hardware or technical support, or hire dedicated IT staff.

**7. Centralised desktop firewall** Is an immediate barrier between your critical data and malicious intrusions.

**8. Email protection** Advanced email anti-spam and anti-virus service provides always up-to-date email protection that improves availability and assures business continuity.

**9. Remote accessibility** Staff administrators can access the McAfee Security Center console from anywhere.

**10. Customer support** Technical assistance at the other end of the phone or via email.
